Creating a New Ditch

AGPS DITCH PRO

Verify you are in *SVY* mode

1 → *Start* at the **High Point** of the Ditch with the **blade** raised **up**

2 → *Press* and *Drive* to **Low Point** (outlet) of the **ditch**

3 → *Press* and *lower* the **blade** to the **ground**

4 → *Press* to **design** the **ditch**

Verify the menu bar looks like this

5 → *Toggle* **Machine Control** on your tractor and **cut** the **ditch**

6 → *Press* when **done** to **start** a new **ditch**

Recalling an Existing Ditch

Verify the **GPS** correction is the **same** as when the **ditch** was **designed**

1 → *Drive* to a **ditch** that has already been **designed**

2 → *Press* and *hold* [SVY icon] to open the *Pass Menu*

3 → *Select* [Pass Menu: SVY, DCH, TOPO, DWK, USE OLD SVY, RESTART PASS] ← *DWK (Ditch Reworking)*

4 → *Press* [CAPTURE OFF] → [CAPTURE ON] to cut the **recalled ditch**

5 → *Toggle* **Machine Control** on your tractor and **cut** the **ditch**

6 → *Press* [DWK icon] to **recall** the **ditch you are closest to**
